

HA High Modulus Dacron

Premium High Aspect Race

High aspect weaves have superior fill strength for higher leech loadings in high aspect sails.

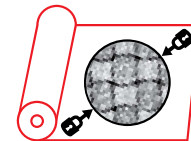

High Modulus Dacron is made with the very best super tenacity polyester sailcloth yarn, Fiber 104, in load bearing directions.

High Aspect HM Dacrons use extremely strong fill yarns to handle the high leech loads on HA sails.

High Modulus Dacron has the most interlockings of any Premium Race polyester fabrics. The result is excellent bias stretch resistance, stability and durability.

Fiber 104™
